

We, the HTM METAXDOOR GmbH, are manufacturers of entrance and passage solutions and have proven ourselves in our industry. We offer elegant entrance and passage solutions that are not only in harmony with the buildings structure and are intended for different areas of use, but also have functionality.

Our company has a large number of product groups with different structures and modes of action depending on the areas of application. The product development and design department in our company designs special door systems for you, according to your requirements and needs, that adapt to the structure of your building and put them into practice.

In order to be able to offer todays technology in the highest possible quality, our R&D department, consisting of experts experienced in their field, always works with the latest technological standards. With the most advanced technology, we create safe, comfortable areas, especially for doors with automatic use where we go in and out of business centers, hospitals, airports and shopping malls every day.

As HTM METAXDOOR GmbH, we aim to offer you the highest possible quality together with a wide range of products.

MR30-Series Standard Revolving Doors

In addition to their elegance, these doors give each building its own character and appearance. While on the one hand you have high insulation against external influences such as noise, dust and heat, which ensures energy savings, you create on the other hand a cozy atmosphere for those in the building.

**GRA-Series Grand Revolving Doors** 

METAXDOOR GRA revolving doors are specially designed for maximum efficiency at entrances and exits with busy pedestrian traffic. You get a high and reliable performance, maximum isolation, a smooth entrance and create special decorative differences with the different showcase options.

**GL30-Series All-Glass Revolving Doors** 

These doors are made entirely of glass and slim stainless steel profiles. They are designed so that they can be easily integrated into transparent facades. In addition to all these functions, it also offers you the insulation and smooth operation of standard revolving doors.

Wherever you need a reliable and economical passage system, **METAXDOOR MR30 / SM**, our manual revolving door, is the solution you have been looking for.

Manual revolving doors from the **METAXDOOR** MR30 / SM series also offer you a variety of exterior designs and chic looks to match the architecture of the building. Manual revolving doors of the METAXDOOR MR30 / SM series are specially designed for entrances where reliability and cost efficiency are in the foreground. These doors, made of aluminum and glass, can also be produced in an automatic version on request.

In adverse conditions and if you want an economical pass-through solution that also corresponds architecturally to your building, manual revolving doors from the METAXDOOR MR30 / SM series are made just for you.

### **Book fold mechanism (break-out)**

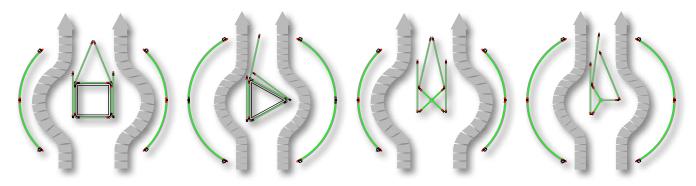

The book fold mechanism can be used on different type of revolving doors. This system, which can be used for both 3- and 4-leaf versions, ensures that the leaves are folded when sufficient force is applied on them. This system, also known as break-out, is activated when the door leaves are pressed with force in an emergency. The leaves, which fold around the doors center, provide a free and empty passage to the outside. The folding mechanism works as described below.

When the mechanism is activated and the leaves are folded around the doors axis, sensors on the leaf-axis detect this movement. As soon as this movement is detected, the motor will stop immediately and the rotation will stop. The door will continue to operate normally when the leaves are returned to their original position.

This system enables the building to be evacuated quickly. In addition, this can also be used in everyday life if necessary to allow manual use of the door. This function is particularly preferred in shopping malls, hospitals, etc.

Break-Out MR30/SA 3-leaves and 4-leaves

Break-Out GRA 4- and 3-leaves, with and without a showcase

#### Air curtain

Metaxdoor revolving door systems can be equipped with an air curtain systems. The special ventilation systems have a circular design that has been adapted to the diameter and structure of the revolving doors. The air curtains can be used either as an electric or a hot water version.

### **Activation**

Metaxdoor revolving doors offer the user a variety of activation alternatives. Various activation options such as radar, code field, card reader, non-contact sensor switch, elbow switch, fingerprint reader, remote control, etc. are manufactured in such a way that they are compatible with the system. These options give you easy access control.

# Safety

Metaxdoor revolving door tems have a flawless security system and thus offer you complete protection against any incidents. Hand safety edges are attached to each main and counter closing edge, late entry safety sensors also monitor the entire counter closing edge. Any kind of crushing between the door leaves and the drum walls is therefore out of the question. The lower secondary closing edges of the door leaves are protected by heel safety edge. These stop the door at the slightest contact and thus prevent people from being injured inside the door. Curtain safety sensors can be installed in the door depending on the project requirements. These are located in the direction of rotation on the upper secondary closing edge of the door leaf. These sensors stop the door if there is an object in the way before the object touches the door leaf.

METAXDOOR GL30/SM is your choice when aesthetic, economical and transparent entrance solutions are required. Simple and timeless design meets easy handling. Our manual all-glass revolving door is the entry into a new world.

The modular system of **METAXDOOR** revolving door canopies enables easy assembly and maintenance. The individual canopy sheets can be taken out separately and moved within the construction. So you can take out one or two elements and move the rest of them so that you can easily reach the desired location inside the canopy.

The canopy sheets are standard in the same color as the door. However, they can be adapted as required and thus give your building an individual character. There are no limits to your imagination ... You dream it, we build.

If you wish, we can also deliver the center of the canopy ceiling in the color you want. By default, the center element of the canopy ceiling comes in black, but here too your imagination is given freedom, so that you get exactly the door that you have in mind.

# Your connection to the door

With the HMI of METAXDOOR - MX60ie and MX70ie, you can also establish a connection to the door from the other side of the world and provide services.

MX50ie

With the MX50ie you are in full control. You can adjust the operating modes to suit your needs with simple а touch. You can also make certain settings on the door and carry out services. Sensors and safety edges of the door are displayed in the HMI and can thus be checked. This model is the ideal size to be mounted on the door or a stand.

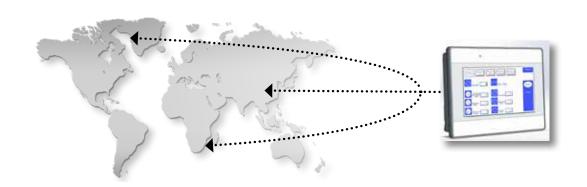

MX60ie

The MX60ie gives you all the features you will find in the MX50ie. You also have the option of connecting to the EasyAccess 2.0 via an internet connection. So you can offer your services from anywhere. Like the MX50ie, this model can be mounted on the door itself or on a stand.

MX70ie

With its 7 "display, the MX70ie is easy and clear to use. This HMI is intended for service personnel and, like the MX60ie, can be connected to the EasyAccess 2.0 via a connection to the Internet. You have full control and insight into the door, so that you always know how the door is running.

**METAXDOOR M-COM** is designed for entrances where other revolving doors are insufficient to offer solutions. The system with a 2-leaf construction and a sliding door in the middle allows very large objects to pass through the revolving door.

METAXDOOR M-COM works on the principle that the ceiling rotates completely. This allows it to be installed around a column or similar structure. The break-out mechanism, which can be used in an emergency, can also be attached to this system. METAXDOOR M-COM is the most popular and most practical entry system for buildings with a high number of people such as shopping centers, hospitals, airports and hotels. It enables easy entry and exit in these buildings with large and bulky items such as luggage, hospital beds or shopping carts.

A night Shield, which is integrated by default, always offers you the security you want at an entrance. As soon as the night mode is activated, the door rotates two rounds and stops so that the showcases at the end of the leaves prevent passage and the door is thus locked.

Dimensions are for informational purposes only and are to be changed according to static necessity.

Safety in revolving doors plays a major role. All closing edges on our doors are secured in such a way that you do not have to think about them during operation. Contact edges and safety sensors ensure perfect protection.

### 1 Hand Safety Edge

These are attached to both the door leaves and the drum walls. You thus secure the main and counter-closing edges. If pressure is exerted on the contact strips, emergency braking occurs and the door comes to a standstill. As soon as the contact strip is released, the door continues its rotation.

## 2 Heel Safety Edge

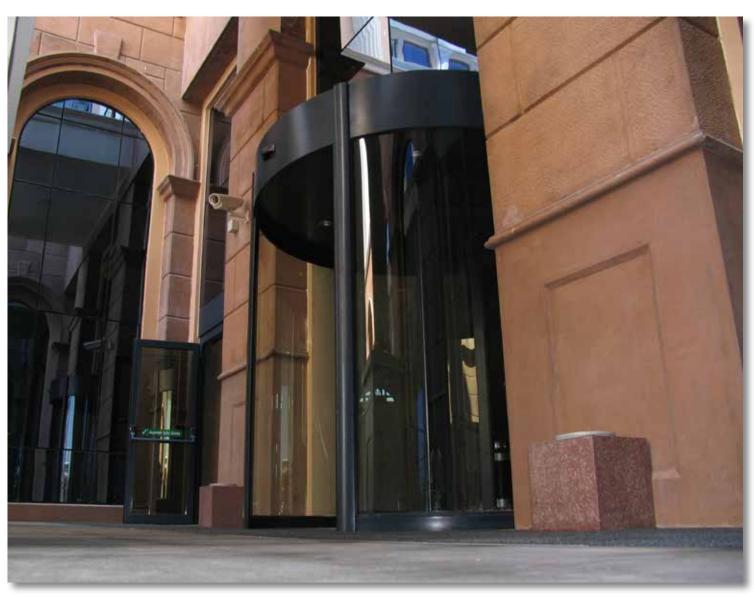

The safety contact strip attached to the lower secondary closing edge protects the heel area. If pressure is exerted on the contact strips, emergency braking occurs and the door comes to a standstill. As soon as the contact strip is released, the door continues its rotation.

### **3 Curtain Safety Sensor**

This moving sensor ensures that the door comes to a standstill as soon as something is detected in its field.

# **4 Late Enrty Safety Sensor**

This sensor is activated as soon as the door leaf approaches the counter closing edge. If something is detected by this sensor, the rotation stops and the door comes to a standstill.
